PrintSearch

Quick ID System
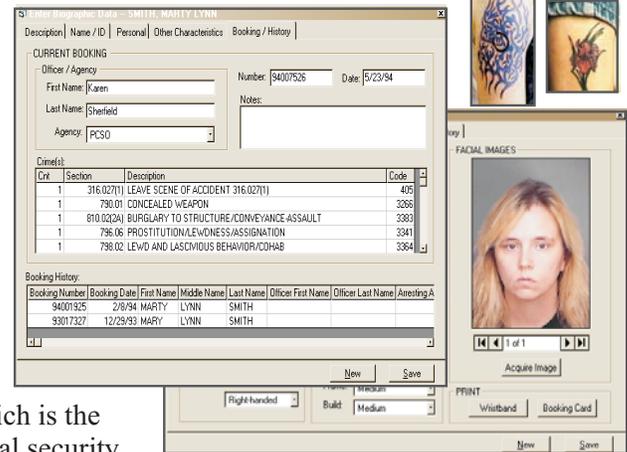

The Scan Results Screen displays the original finger print, the current fingerprint scan and the image. By clicking on the image the system will display the biographical record and data of the individual

image quality = 96
(minimum is 30)
minutiae points = 92
(minimum is 30)

◆ **PrintSearch has the flexibility to search on multiple fingers,** one or any combination of ten, providing very quick, positive identification or verification. The system gives the ability to use multiple biographical filters to further enhance the positive accuracy rate and increase the speed of results. The filter feature is flexible and can be used either after or after the scanning process.

◆ **PrintSearch provides a positive match** in a matter of seconds. The speed of the system allows an agency to use positive fingerprint identification for access control, time clock or time and attendance and visitor control functions.

◆ **When implemented as part of mugSearch,** or integrated with records management, PrintSearch provides complete booking records, photos, and booking history as well as information and images of scars, marks and tattoos.

◆ **Images are scanned at 500 dpi**, which is the FBI certified standard. For additional security both sets of prints can be enlarged and displayed on a monitor or printed for latent examination. The system displays the image quality and the number of minutiae points.

◆ **PrintSearch does not require officer intervention** to scan a print. There are no special treatments required such as cleaning hands or cleaning the scanning equipment.

◆ **Mobile fingerprint scanning** units for squads, transport vehicles, head count, and medical personal

◆ Web interface for quick identification in mobile units, identification can be confirmed from the field prior to transport. The web interface displays a mug shot image along with fingerprint identification on mobile / notebook computers in squads using the agency's existing mobile network.
