

# ID-GANGS™

idSoftware Identification Managements Systems

The country has experienced a disturbing increase in crime over the last decade. One of the factors contributing to the growth of the crime rate is the emergence of "gangs." Given these alarming statics it is evident that statewide youth and street gang data bases need to be established with access and reporting from all law enforcement

**ID-GANGS™** is a module of idSoftware's PrintSearch Mobile Identification Management System. ID-GANGS™ is a robust Field Interview (FI) database system which captures and organizes information specific to gang members identified and interviewed in the field. A gang database management system which provides officers an easy way to capture, analyze, search, and share gang intelligence in compliance with federal and state laws.

The system follows the mandated format of CAL-GANGS and allows for unlimited database search and reporting.

## ID-GANGS™

- Automatically fills in required fields by scanning a drivers license
- Automatically fills in the required fields by retrieving information from a fingerprint inquiry
- Instantly update Cal-Gangs from the field
- Historical Gang Interviews available for viewing on the MC75A or on any notebook or table
- No additional data entry
- Dictate narratives
- Capture pictures of gang graffiti
- Capture pictures of tattoos
- Capture pictures of vehicles associated with gang members
- Auto fill location of gang interview using on board GPS
- Secure device and data with fingerprint login
- Capture all data on handheld rugged computer
- Store data locally as well as upload to Cal-Gangs
- Establish secondary database of fingerprints and mugshots of gang members
